

ONE THOUSAND DRONES ACADEMY

Project-based electronics & drone-hardware education

PUBLISHER MEDIA KIT

academy.onethousanddrones.com

Every project ends in a bill of materials.

Our learners aren't browsers - they finish each lesson with an itemized BOM and KiCad-ready footprints, so they reach a purchase decision with specific, high-intent demand for components, dev boards, and fabricated PCBs.

Who we are

One Thousand Drones Academy is a project-based learning platform that teaches people to design and build real electronics and drone hardware - from reading a first schematic to laying out a custom PCB. Learners advance through a structured skill-tree curriculum of hands-on projects, each built around real components and a complete bill of materials. Registration is open and self-serve, with per-learner progress tracking.

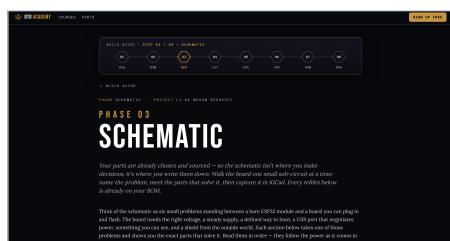

Newly launched	High buyer-intent	US-based
Platform stage - 2026	Every learner finishes with a BOM	HQ: Broken Arrow, OK - global-facing

Launched in 2026 and building our audience now - we partner early so the parts a learner buys are the ones our lessons already specify. Our pitch is intent and relevance, not scale.

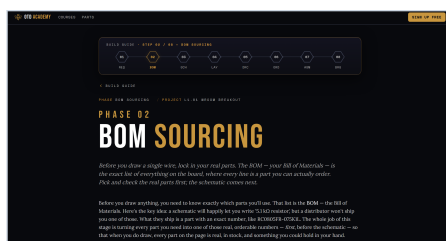

Why advertisers convert here

- **Purchase intent is built into the product** - a real parts catalog with structured BOMs, 3D part previews, and KiCad symbol/footprint data, not links bolted onto blog posts.
- **Contextual, first-party placement** - affiliate links sit inside the exact lesson and BOM where the learner already needs that part. No coupons, incentives, or pop-ups.
- **A renewing top-of-funnel** - beginner-friendly on-ramps bring a steady pipeline of new makers buying their first components, then more with every project they complete.

Ideal partners

Electronic-component distributors, PCB fabrication services, and development-board and tool makers whose catalogs map directly to the parts our curriculum already specifies.
